LENDING CLUB CASE STUDY

Varsha Menani

Problem Statement

Lending Club

Lending Club is the largest online loan marketplace, facilitating personal loans, business loans, and financing of medical procedures.

Borrowers can easily access lower interest rate loans through a fast online interface.

Objective

Lending Club wants to understand the driving factors behind loan default, i.e., the driver variables which are strong indicators of default.

The company can utilize this knowledge for its portfolio and risk assessment.

Problem Statement

As a data scientist working for Lending Club analyze the dataset containing information about past loan applicants using EDA to understand how consumer attributes and loan attributes influence the tendency of default.

Analytical Approach

Data Cleaning

- Columns with 80% or more missing values, all random values, or a single value column should be removed.
- Convert values to the appropriate int, datetime and float representations

Univariate Analysis

- Check distributions , frequencies and count of various numerical and categorical variables
- Create derived variables through binning

Segmented Univariate Analysis

- Analyze variables against segments of other variables
- Create derived variables

Bivariate Analysis

- Do correlation analysis
- Check how two variables affect each other
- Analyze joint distributions

Summarize Results

- Summaries the key factors helps in detection of Defaulters
- Publish the results

Data Provide By Lending Club

Lending Club data is broadly classified into three categories, as shown in the table below, and some important columns under each category are also shown below:

Applicant Information

- Grade
- Sub-Grade
- Employment Title
- Employment Length
- Home Ownership
- Annual Income
- Purpose
- Address

Loan Amount & Interest Rate

- Loan Amount
- Funded Loan Amount
- Term
- Interest Rate
- Installment
- Loan Status
- Open Account
- Revol Balance

Applicant Behaviors

- Deling_2yrs
- earliest_cr_line
- inq_last_6mths
- total_acc
- total_pymnt_inv
- last_pymnt_d
- last_pymnt_amnt
- last_credit_pull_d

DATA CLEANING

❖ Lending Club provided us with a dataset that included **39717 records and 111columns**.

❖ We discovered **56 columns with more than 80% missing** values after analyzing the missing values percentage from each column.

❖ Columns with 80% or more missing values are excluded from further analysis.

❖ Columns containing information about **customer behaviors**, such *delinq_2, earliest_cr_line, recoveries, out_prncp, total_acc, last_pumnt_amnt* and so on, are also **excluded from analysis**.

❖ The goal of this study is to identify the factors that assist clients in determining defaulters because these above-mentioned characteristics are only known to clients after loan approval and thus cannot be useful in our analysis.

❖ We also found out that there are some column hold **single value for all records**. There were total 9 columns which show this pattern; hence we **exclude them from our analysis**.

❖ Column such as "int_rate" and "issue_d" are in string format. We convert "int_rate" to float and derived "issue_d_month" and "issue_d_year" column from "issue_d" column.

❖ Rows with **loan status "Current"** were also **removed** as they were irrelevant to the purpose .

Data Understanding

➤ There are 38,577 applicants in all.

➤ The number of defaulter applications is 5827.

➤ The default rate is 14.6%.

Number of Applicants by Loan-Status
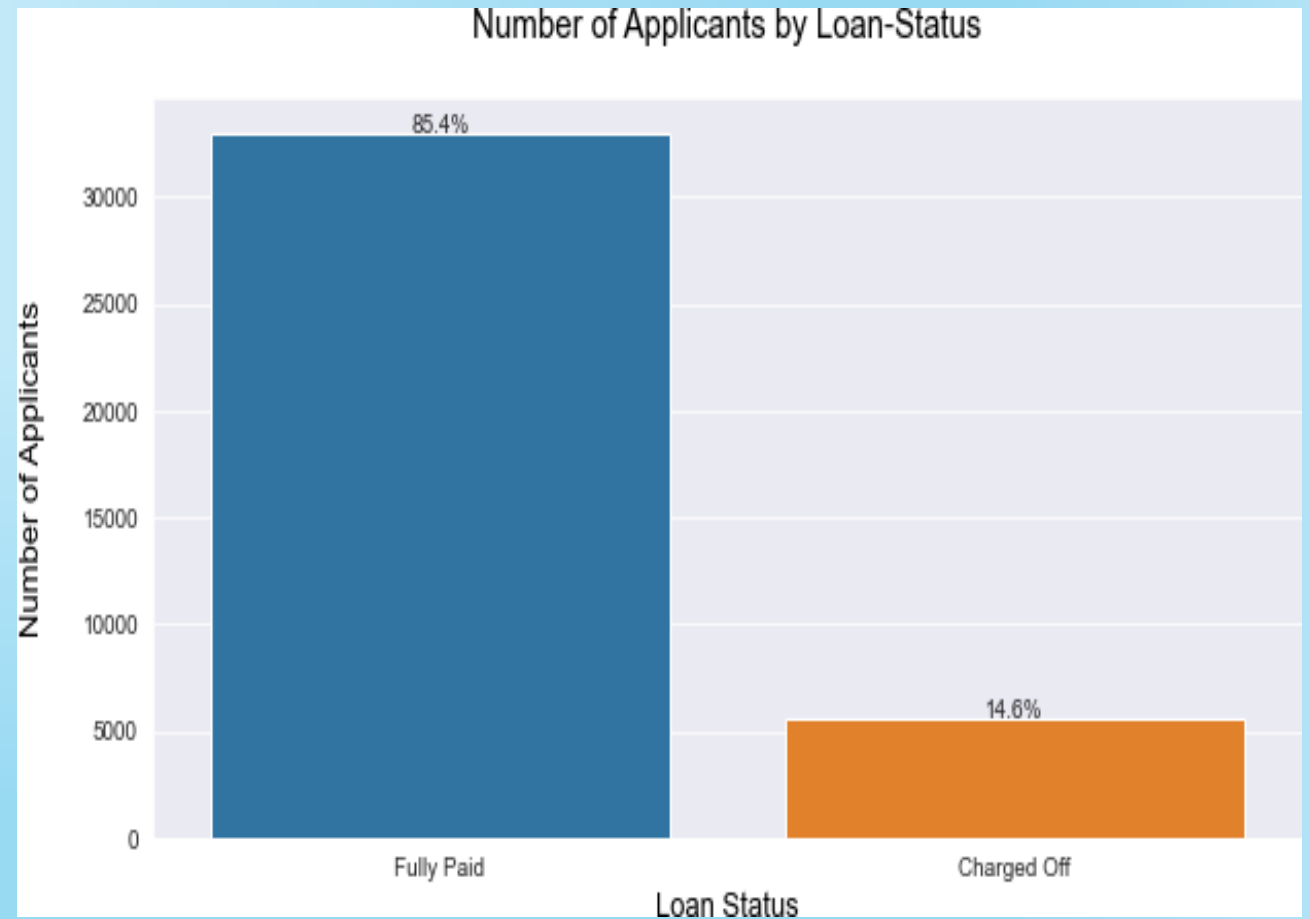

Year wise Application Distribution

➤ The number of application for loan are drastically increasing every year

➤ In 2011 there is 78% increase in application compared to 2010

➤ Similarly, there is 145% increase in application from 2009 to 2010

Loan Application Issued Year Wise
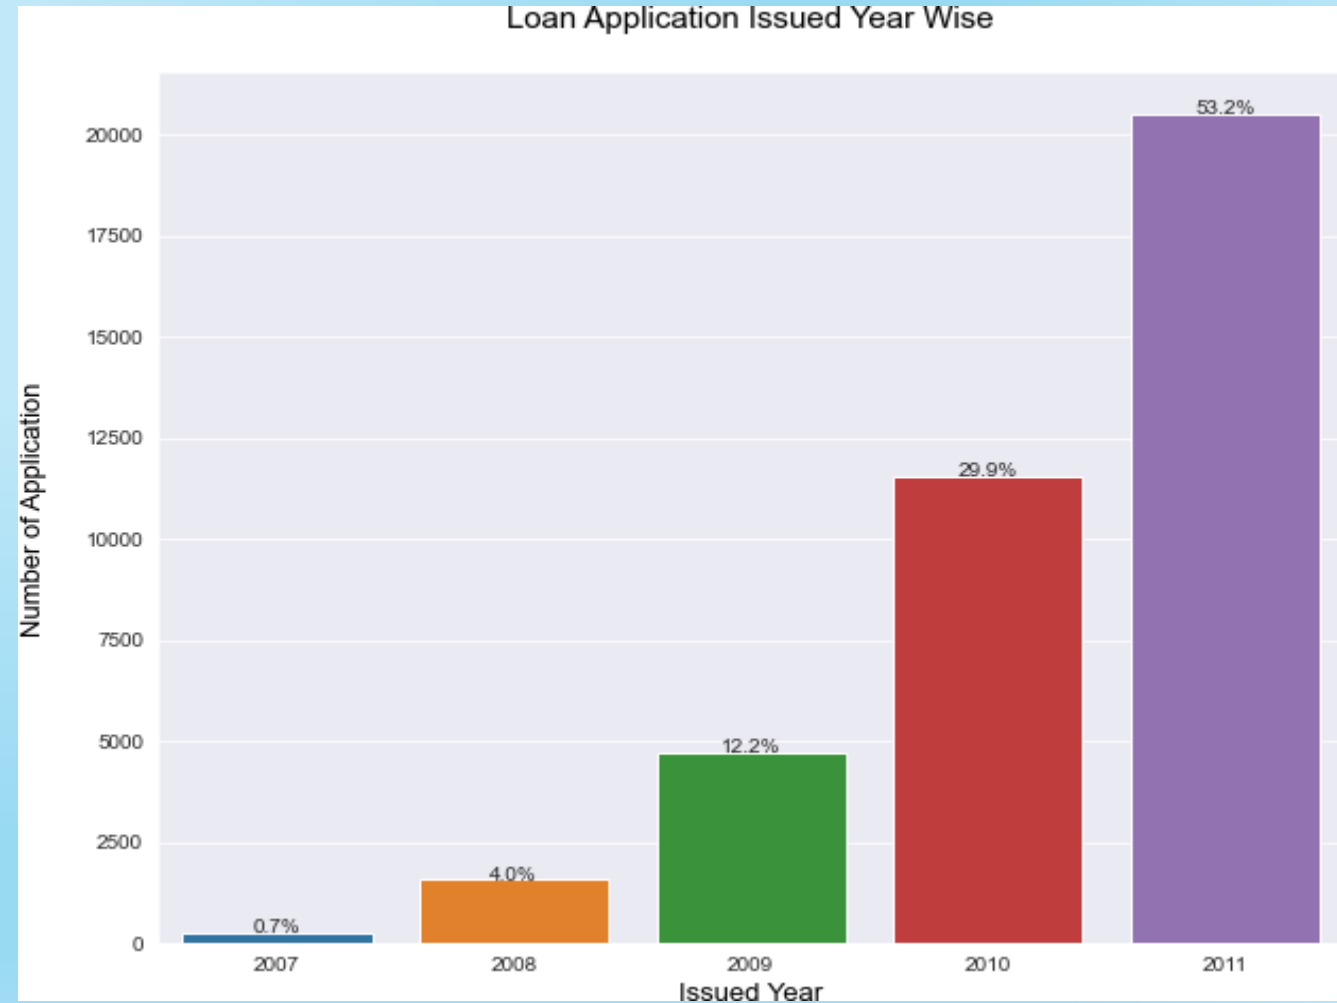

Effect of Grade on Defaulters

➢ For grade G and F has high percentage of defaulter i.e 34% and 32% respectively.
➢ Lower grades have high chance of defaulter, hence should take extra security while approving such loan applications.
➢ Lending Club charges higher interest rates as the grade of loan becomes worse.

Grade Wise Defaulters Distribution

Grade Wise Interest Rate
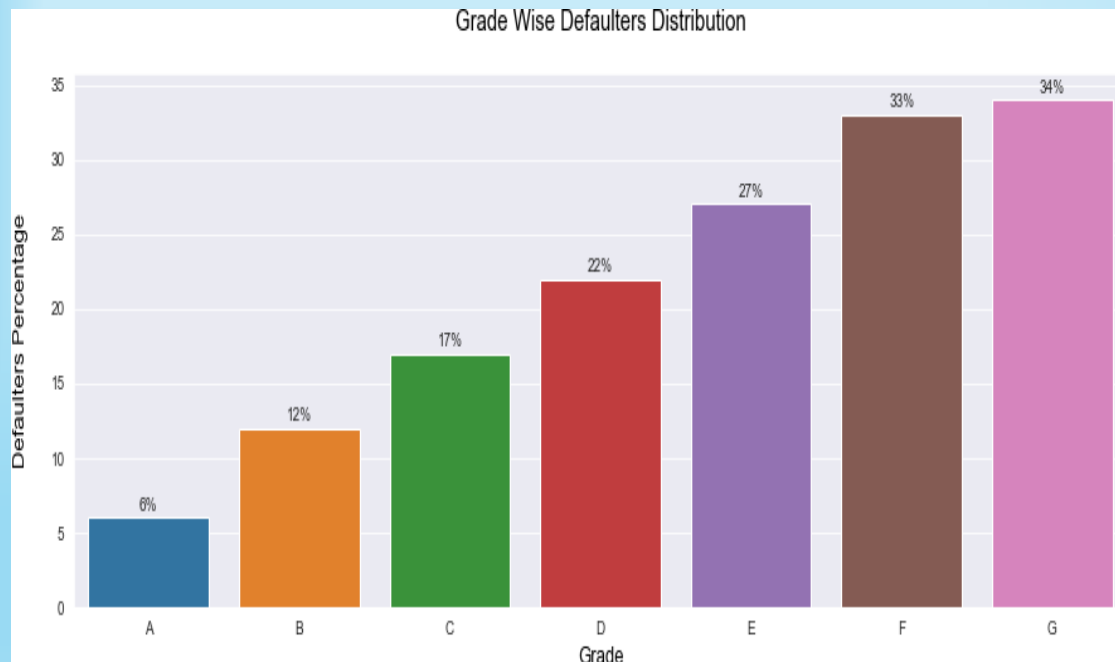

Effect of Sub Grade on Defaulters

Sub-Grade Wise Defaulters Distribution
➢ Sub Grade F5, G3 and G5 has high number of defaulters, for such applicants' clients need to takes extra measure before approving the loan applications.

➢ As the Sub Grade increases from A to G the percentage of defaulters are also increasing this is due to high interest rate on lower grades

Effect of Term on Defaulters

Term Wise Number of Applications

Term Wise Defaulters Distribution
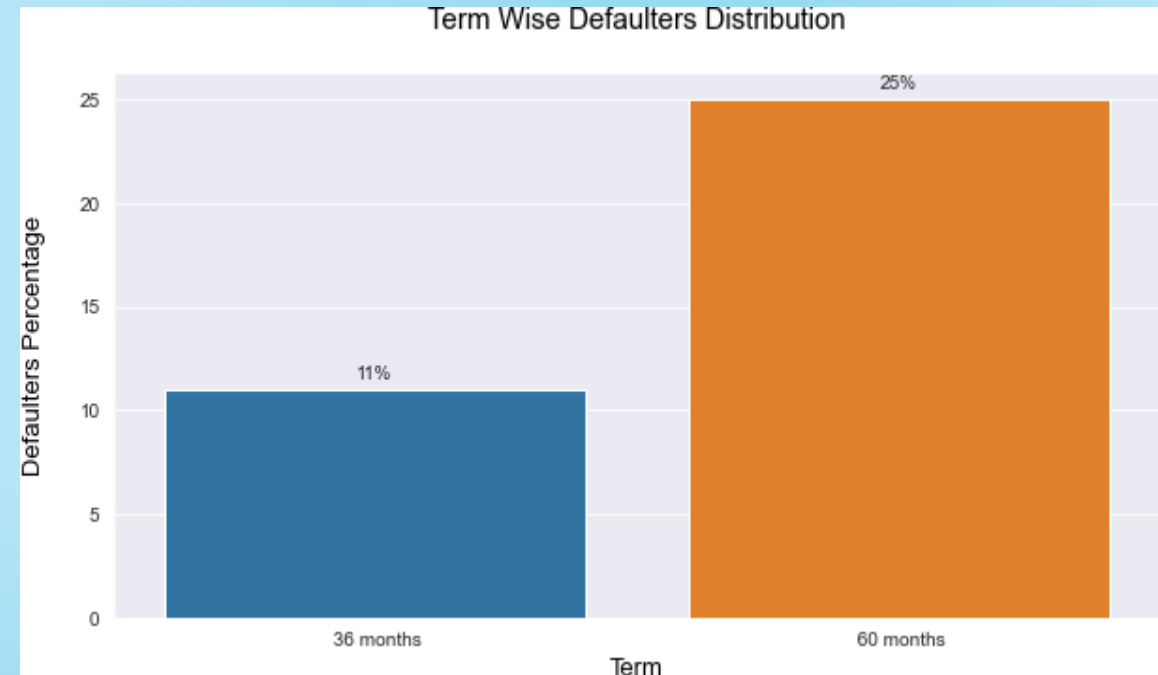

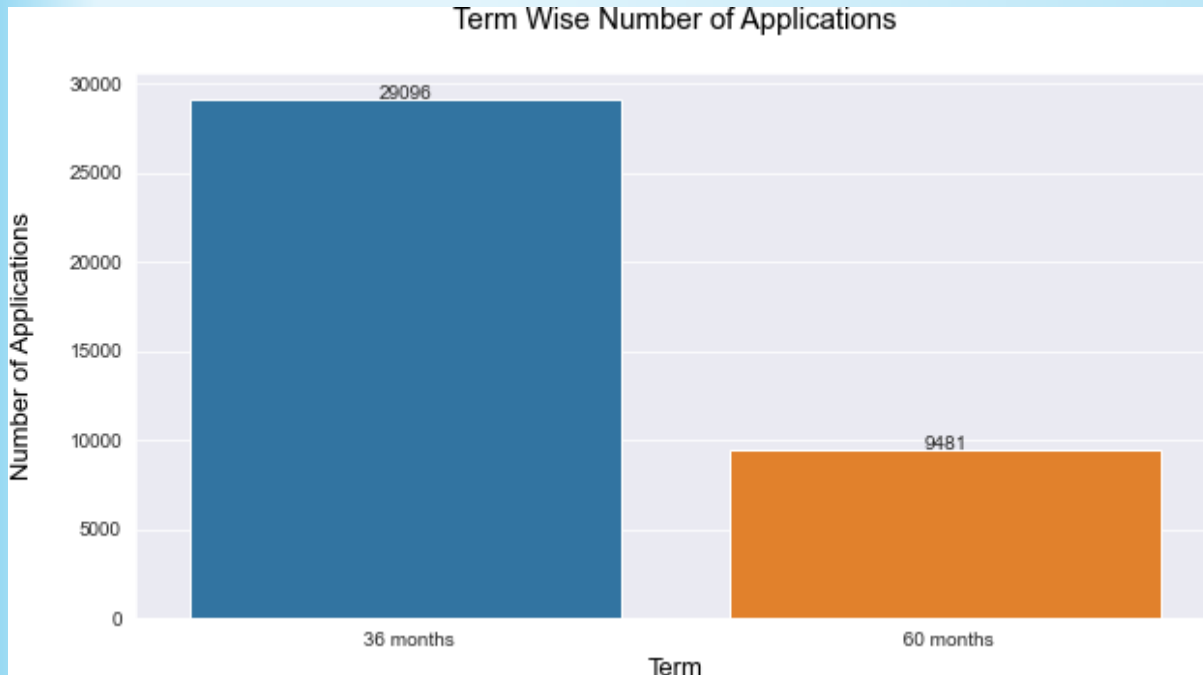

➢ According to the left graph, more loan applications are for Short-Term loans, i.e., 29,096 of total applications are for Short-Term loans.
➢ However, the rate of defaulters is higher in the Long-Term. As compared to the Short-Term, it is more than double. As a result, Long-Term applicants are more likely to default.

Effect of Verification Status on Defaulters

Verification Status Wise Number of Applications

Verification Status Wise Defaulters Distribution
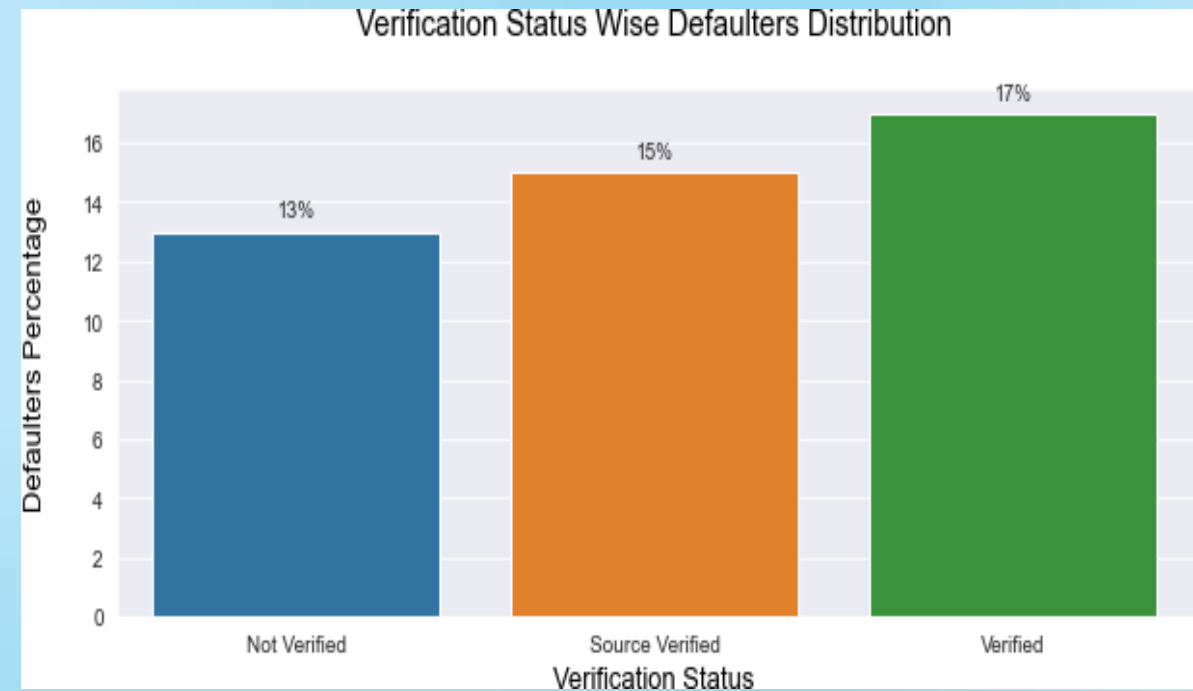

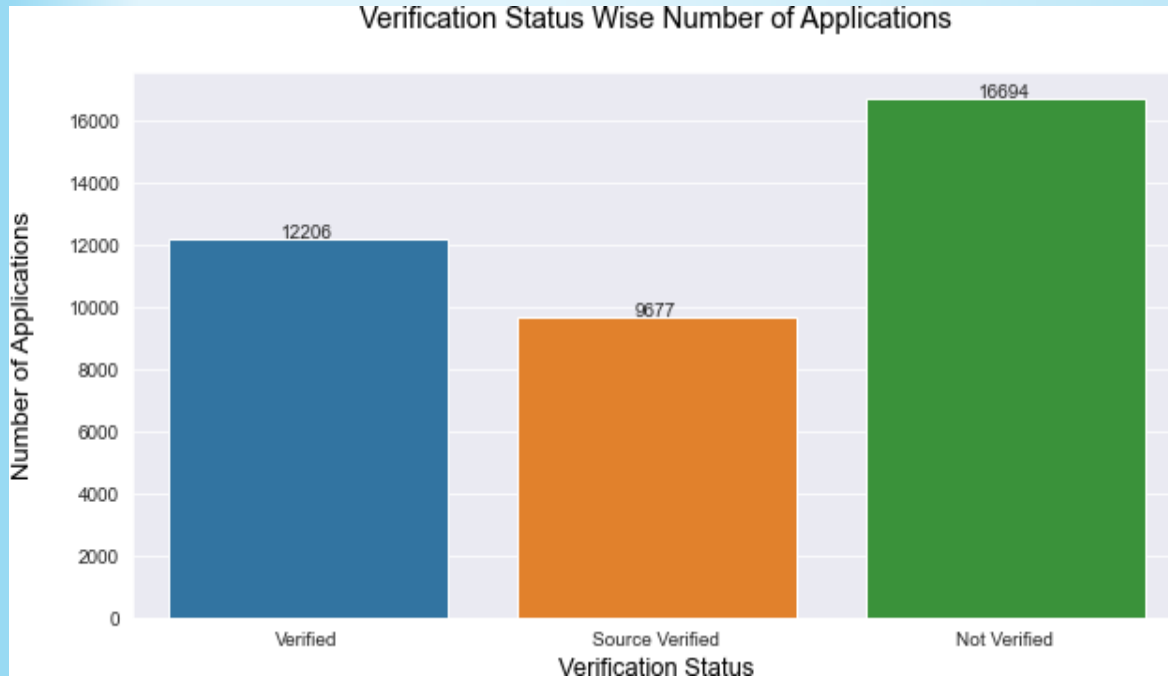

➢ From left chat we can clearly see that number on "Not Verified" applications are more than "Verified" and "Source Verified"

➢ Surprisingly, right chart show that the percentage of defaulter is more in "Verified" category

Purpose for Loan Application

Loan Purpose Distribution
➤ The 40.8% of loan application is for "debt_consolidation" purpose hence should take extra security while approving the loan applications.

➤ Other than that, 13% are for "credit_card" and 7.5% are for "home_improvement" are some major purpose.
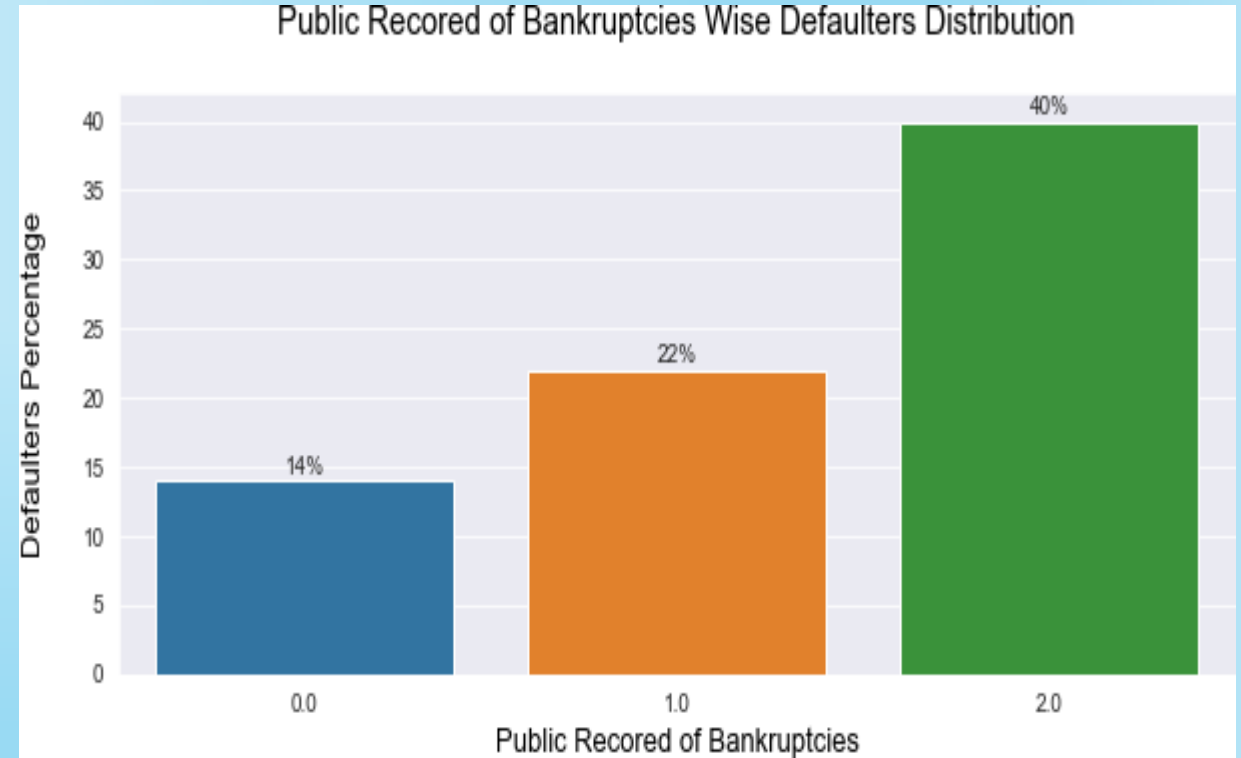

Effect of Loan Purpose on Defaulters

Loan Application Purpose Wise Defaulters Distribution
- ➤ "small_business" has around 27% of defaulter which is heights among all other categories
- ➤ "education" has 17% of defaulter which is 2nd height among the list
- ➤ More than a quarter of loans taken for the purpose of running a "small_business" see defaulters hence should take extra security while approving such loan applications.

Public Record of Bankruptcies

➢ Applicant having prior record of bankruptcies are more likely to be defaulters

➢ Hence extra care needs to taken while approving loan for such applicants

Public Recored of Bankruptcies Wise Defaulters Distribution

Effect of Loan Amount on Defaulters

➢ Value above the bar indicates the range of value is considerate in that category

➢ Loan Amount 500 to 9,125 belong to "low" bins

➢ Clearly, we can see the trend that as the loam amount increases the percentage of defaulter is also increase

➢ While approving the loan in Very-High category extra alertness is required

Loan Amount Wise Defaulters Distribution
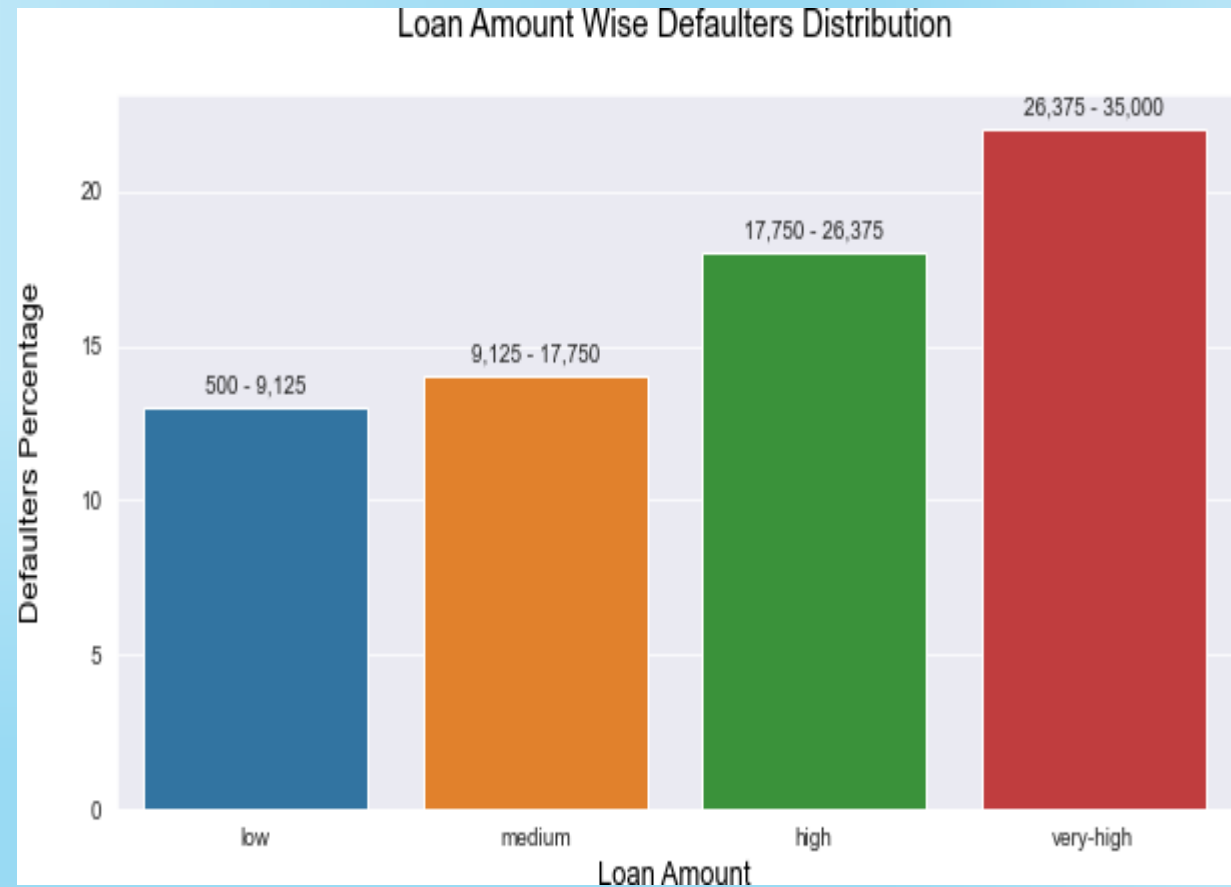

Effect of Interest Rate on Defaulters

➢ Value above bar indicating the range of interest into different category

➢ Interest rate 10.17% to 14.91% are represented by "medium" category

➢ As the rate of interest increases the chance of applicant being defaulter is also increase

➢ While approving the loan in Very-High category extra alertness is required

Intrest Rate Wise Defaulters Distribution
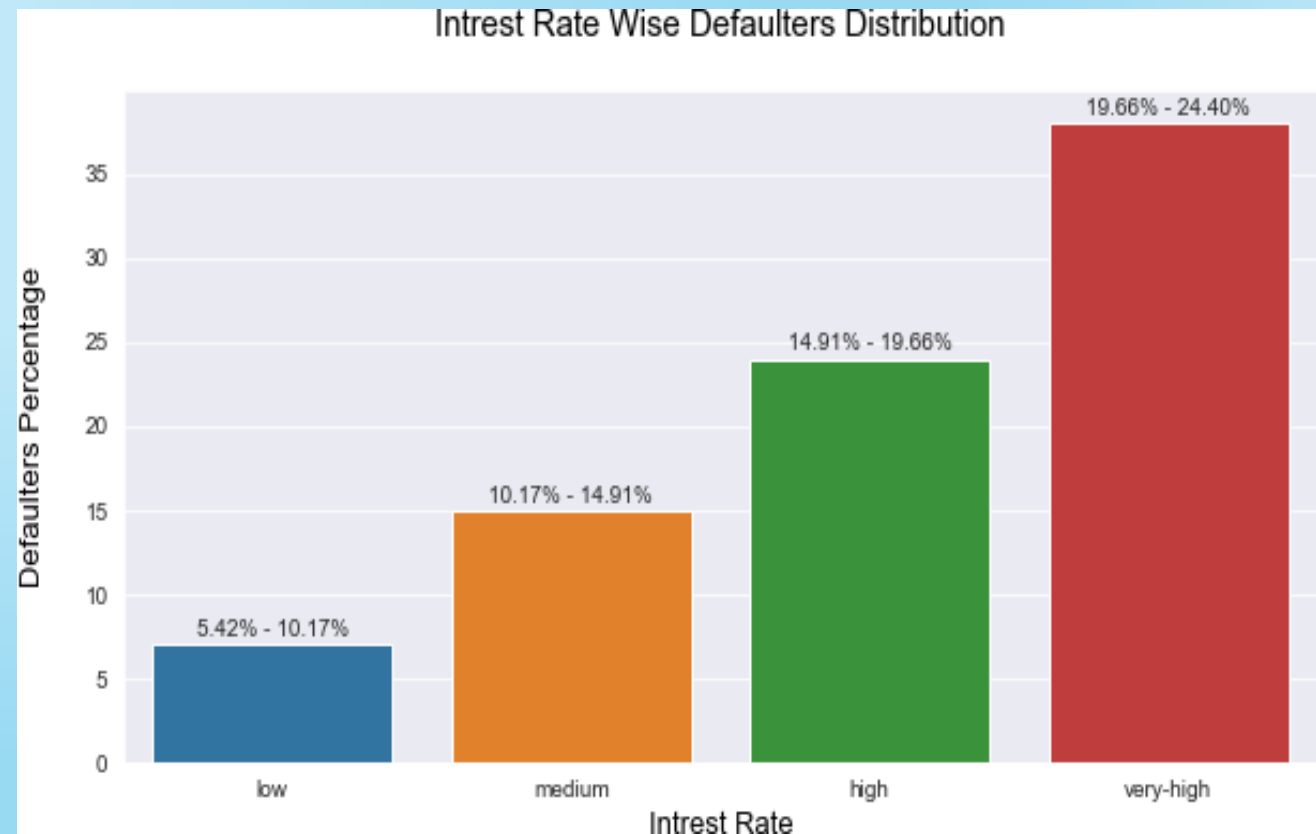

Effect of Annual Income & DTI on Defaulters
➢ Lower the annual income higher the percentages of the defaulter

➢ Higher the DTI higher the chance of applicant is defaulter

Effect of Employment Length
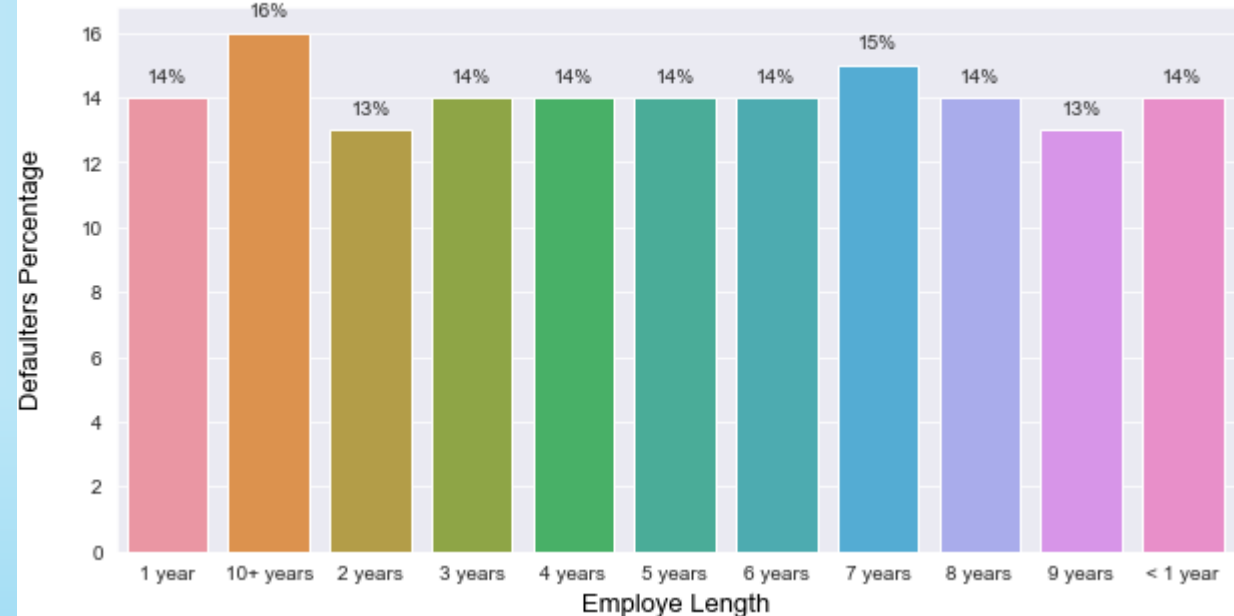

- ➢ Majority of employees applying for the loan have more than 10 years of experience
- ➢ Tendency of person to default the loan with 10 years of experience is also high. So, company need to be careful when granting loan.

18

# Loan amount vs employee experience

Loan Amount vs EMPLOYEE EXP

➤ By doing bivariate analysis it has been observed that the employee exp. With 10+ years is taking more amount of loan
➤ Those who are less than 1 year is taken less amount of loan

Effect of Location on Defaulters

State Wise Defaulters Distribution
- ➢ NE state has highest numbers of defaulters which is around 60%
- ➢ Followed by NV which has 23% and SD and AK has 19% of defaulters
- ➢ Hence while approving the loan from above states extra alertness is required

Loan Given State Wise

Loaction Number of Applications
> The loans which are given for CA, NY, FL,TX state are more than any other state.

Loan amount vs interest rate for Loan Status

➢ Even if the loan amount is low but the interest rate is too high then the count of charged off customers are more than fully paid.

➢ For loan amounts above 25000, approved applications for loans have decreased significantly.

➢ For loan amounts greater than 25000 and interest rate above 15% people mostly charged off than fully paid .

➢ To reduce defaulter high interest rate on lower loan amount should be avoid
Recommendation

➤ Grades and Sub-Grade are one of the good metrics for finding loan defaulters. Lending club has to look into the information from borrowers before issuing loans to low grade like grade F & G and specifically Sub Grades like F5,G5 and G3.

➤ Lending club should reduce the high interest rate for 60 months tenure, there are more chances for loan to get default from long term tenure.

➤ Lending Club before approving loan should take a look at the DTI (Debt to Income ratio) of the applicants. As DTI of borrowers increases their tendency of defaults also increases. Specially for application whose DTI is greater than 14.99 are more likely to be defaulter.

➤ Lending club should be more conscious when approving loans for applicants in the lower annual income segment, borrowers having annual income in range of 4k-50k has more of defaults.

➤ When the loan amount higher the chance of applicants is defaulters is also higher. Lending club should properly analyze the applicants demanding higher loan.

Recommendation

➤ Lending club should be more cautious when approving loan for the purpose of Small business, Debt consolidation ,Credit card and Education.

➤ Loans having higher interest rate i.e., above 19% have more numbers of defaulters. Lending Club should check the background of applicant thoroughly if interest rate is high.

➤ Lending Club should take extra security while approving applicants belonging to NE, NV, SD and AK state, as tendency to default is high.

➤ If applicant employment length is >10 years Lending Club should thoroughly check applicants background as there are many defaulters in >10 years as an employment length.

➤ Applicants with a background bankruptcy should thoroughly check of current financial situation.

THANK YOU
